Applied researcher working to design, implement, and evaluate data-driven solutions to complex problems:

- 6 years experience managing large-scale federal grants and coordinating with multiple stakeholders, hiring and managing teams of data science researchers, and delivering results that drive decision-making
- 10 years experience with causal inference and machine learning research design and execution
- Passionate about translating research into actionable recommendations that inform strategy

Work Experience

University of Pennsylvania, PDRI-DevLab

Research Assistant Professor

July 2024 – Present

Senior Research Associate & Director of Research

July 2022 – June 2024

- Acquired and managed \$3.5 million in funding from federal and private research grants over 2 years
- Worked closely with government agency clients to design research and data products to solve problems
- Managed international collaborations across government agencies, universities, implementing partners, data collection firms, and stakeholders in multiple countries
- Oversaw development and deployment of data dashboards and early warning system (**Shiny**) to inform crisis response and policy planning (800 policymakers signed-up for newsletter)
- Designed, managed, and analyzed long-term RCTs and online experiments to measure success of client projects and generate insights on program design and administration
- Developed course and mentored students on statistics, causal inference, and research tools (**R**, **Quarto**, **GitHub**)

Duke University, DevLab@Duke

Senior Research Associate

July 2021 – June 2022

Post-Doctoral Research Associate

January 2019 – June 2021

- Managed development of large-scale webscraping and highly-multilingual ML text classification pipeline (**Python** and **R**) to continuously monitor and forecast political instability in 63 countries
- Designed and managed international RCT involving 120 partner organizations to evaluate program effectiveness at improving financial health of U.S. government local implementing partners
- Designed, programmed (**Javascript**, **HTML**), and analyzed multi-lingual online survey experiments commissioned by clients to inform grantmaking and administration
- Published 3 empirical research articles in peer-reviewed academic journals

Education

University of Pennsylvania • Ph.D. in Political Science

2019

University of Pittsburgh • B.A. in Politics, Philosophy, & Economics (Honors College)

2012

Recent Impact

- Invited public speaking engagements addressing hundreds of policymakers and researchers across more than a dozen agencies, international organizations, and universities in five countries
- Delivered results from commissioned trial applying original data and time-series forecasting to guide budget and operations planning at U.S. Department of State
- Introduced public-facing data products used by policymakers and stakeholders to track political events and anticipate instability in developing countries
- Conducted RCTs to measure the efficacy of programs, advising for programs to be cancelled, adapted, or scaled according to impact
